

VA Outpatient Medical Center

Customer: Veterans Administration

Location: Leesville, LA

Size: 15,000+ sq. ft.

Award Date: September, 2010

Completion Date: June, 2011

Days to Complete: 263

Description

BOXX Modular provided the VA with the turnkey construction of an approximate 15,000 sq.ft. outpatient medical facility, which required a LEED 'Silver' equivalency. The project scope included a poured-in-place permanent foundation system that features a ground-level entry area across the entire front of the building. The project scope included all site utility/drainage work, and back-up emergency generator & potable water storage systems capable of maintaining building operations for 7 continuous days without city services.

Additional features included a stucco exterior finish, a drive-through porte-cochere at the building entryway, various fire-safety and communication systems, and specialized medical facility devices/systems/furnishings. During the project, it was determined that there was insufficient water pressure from the city services to operate the fire-sprinkler system, so BOXX Modular was contracted to provide a firewater storage system capable of supplying 30,000 gallons of water.
